# Sydney

## Bermudagrass

### Characteristics

- Improved turf density
- Excellent drought tolerance
- Good wear tolerance
- Medium-fine leaf texture
- Good salt tolerance
- Good seedling vigor

### Recommended Use

- Golf Courses (fairways and tees)
- Sports turf
- Parks
- Home Lawns

### Seeding Rates

New Turf Applications: 2 – 3 lbs/1000 sq ft  
(1 – 2 kg/100 sq meters)

Repairs of Existing Turf: 1/2 – 1 lb/1000 sq  
ft (1/4 -1/2 kg/100 sq meters)

This is a certified PVP variety of  
Seeds West, Inc.

### Positioning/Management

Sydney is a premium turfgrass that was developed from Australian and domestic germplasms. Sydney has increased turf density and wear tolerance. It has a lush, dark green color and medium-fine texture.

### Establishment and Maintenance

Sydney should be planted when soil temperatures are consistently above 65° F (18° C). For best results, plant in full sun on well-drained soil and maintain soil moisture in the root zone for at least 1 to 2 weeks after planting. Under ideal conditions, germination may begin within 7 to 10 days. Allow 10 to 21 days for full germination. Full coverage may be attained in 4 to 6 weeks, when planting early or late in the season, more time may be needed for establishment. Mowing may begin when grass is 1/3 taller than desired mowing height. It is recommended that no more than 1/3 of leaf blade be removed per mowing. Dormant bermudagrass may be overseeded for year round color, but is not generally recommended on turf less than 6 to 8 months old. Immature turf may be damaged by the vertical cutting and scalping process leaving it unable to compete with the overseeded species during the spring transition.
