

Browning Seed, Inc.

3101 Interstate 27 Frontage
Plainview, TX 79072

Phone: (806) 293-5271

Website: www.browningseed.com

Characteristics

- Environmentally Friendly
- Low Maintenance
- Requires Less Mowing – Or No Mowing at All!
- Tolerant to Drought and Cold
- Easy to Establish From Seed

Recommended Use

- Parks and Playgrounds
- Golf Course Roughs
- Commercial and Residential Lawns
- Erosion Control
- Pasture and Highway Right-of-Ways

Climate Zones

Buffalograss is adapted to Climate Zones 3-11. Buffalograss is the most cold tolerant of the warm season turfgrasses. Ideally adapted to areas that receive 16-35 inches (400-890 mm) of rainfall. Buffalograss is adapted to warm or cool semi-arid climates in Africa, Asia, Australia, Europe, and North and South America.

Seeding Rates

New Turf Applications:

1-3 lbs/1000 square feet

(0.5 – 1.5 kg/100 square meters)

Certified SWI 2000 Buffalograss

Positioning/Management

SWI-2000 is an open-pollinated variety that was developed for increased seedling vigor. SWI-2000 is the fastest seeded buffalograss to fill-in as tested by the National Turfgrass Evaluation Program. The secret is that it was bred for larger seed size, these larger seeds have more stored carbohydrates to help the seed jump out of the ground. It is also the number 1 ranked buffalograss either seeded or vegetative for turfgrass

Establishment and Maintenance

SWI-2000 should be planted when soil temperatures are consistently above 60° F (16° C). For best results, plant in sites with 6 to 8 hours of full sun on well-drained soil and soil moisture must be maintained for at least 1 to 2 weeks after planting through irrigation or natural rainfall. Under ideal conditions, germination may begin within 14 to 21 days. Full coverage may be attained in 90 days. For optimum establishment buffalograss must be fertilized and irrigated in combination with a weed control program. SWI-2000 performs best at mowing heights of 2 – 4 inches (5 – 10 cm). Fertilize with 2 to 4 lb/1,000 sq ft actual N (0.25 to 0.5 kg /100 sq m) per growing season for optimum performance.
