Positioning/Management

Browning 007 is a high yielding hybrid grain sorghum that produces good, stable results in more stressful situations. Browning 007 produces a cream colored grain through a semi-open head. Browning 007 makes for easy harvesting due to its' excellent threshability and good field uniformity.

Annual Summer Management

Planting Date: Late April through mid August. Soil temperature should be 60-65 or warmer. Planting too early could cause slow early growth and reduction in population.

Planting Depth: 3/4" to 1 1/2" deep dependent upon the soil moisture.

Row Width: Preferably drilled in narrow rows .

Planting Method: Drill preferred.

Fertilization for Top End Output: Nitrogen: 100-135 lbs./acre PPI. **Phosphorus:** 20-60 lbs./acre, more if the soil testing indicates less than 30 lbs./acre. **Potassium:** 40-50 lbs./acre. A soil test should be performed for better accuracy. The above fertilization rates serve as a guide only and will vary with water availability.
