Challenger SCA

Hybrid Grain Sorghum

Grain Sorghum | Medium Maturity | High SCA Tolerance

Positioning/ Management

Challenger SCA is a medium maturity grain hybrid with high White Sugarcane Aphid (SCA) tolerance with excellent appearance and drought tolerance making it an excellent fit for dryland fields in Great Plains with excellent yield potential.

Key Advantages

- High Sugarcane Aphid tolerance
- Excellent drought stress
- Excellent panicle exertion under drought stress
- Semi-open Head with great uniformity
- **Stiff Stalk** and **Staygreen** traits for improved yield and standability under drought stress
- Excellent for Great Plains dryland fields

Annual Summer Management

Planting Date: Late April through mid August. Soil temperature should be 60-65 or warmer. Planting too early could cause slow early growth and reduction in population.

Planting Depth: 3/4" to 1 1/2" deep dependent upon the soil moisture.

Row Width: Preferably drilled in narrow rows.

Planting Method: Drill preferred.

Fertility: Nitrogen: 100 to 135 lbs./acre PPI
Phosphorus: 20- 60 lbs./acre, more if the soil testing indicates less than 30 lbs./acre. Potassium: 40-50 lbs./acre. A soil test should be performed for better accuracy. The above fertilization rates serve as a guide only.
