Grain Sorghum | Medium – Early Maturity
| Food Grade

Positioning/ Management

Our 777 W hybrid is a medium-early hybrid with cream grain on a tan plant (food grade) that is very well adapted to the Great Plains because of its drought tolerance.

Key Advantages

- Food grade quality grain sorghum
- Good drought tolerance
- Low tillering capacity
- Responds well to narrow rows
- Cream grain on tan plant (food grade)
- Strong appearance
- Very good option for double cropping or late planting

Annual Summer Management

Planting Date: Late April through mid August. Soil temperature should be 60-65 or warmer. Planting too early could cause slow early growth and reduction in population.

Planting Depth: 3/4” to 1 1/2” deep dependent upon the soil moisture.

Row Width: Preferably drilled in narrow rows.

Planting Method: Drill preferred.

Fertility: Nitrogen: 100 to 135 lbs./acre PPI
Phosphorus: 20- 60 lbs./acre, more if the soil testing indicates less than 30 lbs./acre. Potassium: 40-50 lbs./acre. A soil test should be performed for better accuracy. The above fertilization rates serve as a guide only.
