Primary Uses

- Silage
- Hay
- Occasional Grazing

Benefits

BQS 417 is a blend of Vernal and Cuf 101 Alfalfa, offering versatile use as a cover crop or forage. It is highly drought tolerant and adaptable to various soil types. The blend provides benefits such as high-quality hay and forage production, nitrogen fixation, and soil improvement. It can be sown in spring or late summer, and the recommended seeding rate is 1/2 pound per 1000 square feet or 12-15 pounds per acre. BQS 417 is a convenient choice for agricultural applications and cover cropping.

Why our BQS 417 Custom Alfalfa Blend?

BQS 417 is a proprietary blend of Vernal alfalfa and Cuf 101 Alfalfa, offering a versatile and high-quality forage solution for farmers and landowners. This blend combines the benefits of Vernal alfalfa as a cover crop and forage for livestock and wildlife attractant, with Cuf 101 Alfalfa known for its superior hay and forage production. BQS 417 can be planted in Spring, Summer, or Fall, and it excels in drought tolerance, making it suitable for various soil types and environments. With its adaptability and resilience, BQS 417 provides customers with a reliable and sustainable option for their agricultural needs.

Planting Rates

Sow 1/2 pound per 1000 square feet; 12-15 pounds per acre. Great for sowing between crop rotations as a high nitrogen producing cover crop. Pre-inoculated.
