- Very long lived
- Adapted to a broad range of soil types
- Very self-reliant
- Fairly tolerant to spring flooding along with other stressors
- Moderately Drought tolerant

### Varieties

- Butte
- El Reno
- Pierre
- Trailway

# SIDEOATS GRAMA

### Why our Sideoats Grama?

Sideoats Grama is a native warm-season grass that offers a range of benefits, making it an excellent choice for landscaping and conservation projects. With its fine leaves and distinctive oat-like seeds, it adds visual interest and texture to landscapes. The grass's bluish-green color, drought tolerance, and long-lived nature make it resilient and well-suited to various environments. Sideoats Grama's sod-forming growth habit helps control erosion and stabilize soil, while also providing habitat and food for wildlife. By choosing Sideoats Grama, customers can enhance the beauty of their landscapes and contribute to conservation efforts.

### Seeding Rates

USDA recommends planting 1.5 pls/acre for grazing or hay. 2.0 pls/1000 Sq. Feet is recommended for turf or yards.
