## Sorghum-Sudangrass Hybrid Blend

### Agronomic Attributes

Potential Forage Yield	2
Early Growth Rate	3
Regrowth	3
Average Plant Height	8'-10'
Standability	2
Drought Tolerance	1
Leafiness	3
Avg. Seeds/ Lb.	18,000 - 20,000
Fast Dry Down	3

### Primary Uses

Hay	2
Hay Plow Down	1
Silage	3
Grazing/Pasture	2
Greenchop	2

### Suggested Harvest Height

Hay/Plow Down	Pre-boot, Flag Leaf Stage, or 40" - 60"
Grazing	30-45 Days or 20" - 25"
Silage	35" - 50"
Greenchop	30" - 40"

### Planting Rate (LBS./Acre)

	Optimal Planting Method	
	Wide Rows	Narrow Rows
<b>Moisture Level</b>	30" to 40"	Drilled or Broadcast
Adequate	15 to 30 LBS/AC	50 to 80 LBS/AC
Limited	12 to 20 LBS/AC	30 to 60 LBS/AC

**Footnotes: 1- Numerical Rating: 1 to 9 1= Excellent 5= Average 9= Poor**  
Ratings and descriptions are based on the research and field observations that were compared with products from multiple locations and years. Read all labels and bag tags due to the reason that they contain conditions of sale, including limitations of warranty and remedy.

### Why our Three Little Indians?

Three Little Indians® is a premium forage sorghum and sorghum-sudangrass hybrid blend that offers a range of advantages to our customers. With at least 75% sorghum-sudangrass and the remaining portion as forage sorghum, it is specifically designed for optimal forage production. This versatile product is suitable for cover cropping, hay production, and grazing cattle. It stands out for its exceptional palatability and can grow to a height of 8-10 feet, providing abundant biomass. In summary, Three Little Indians® is a high-quality, adaptable forage blend that offers excellent taste, impressive growth potential, and multiple benefits for forage production and livestock needs.

### Annual Summer Management

**Planting Date:** Late April through mid

August. Soil temperature should be 60 -65 or warmer. Planting too early could cause slow early growth and reduction in population.

**Planting Depth:** 3/4" to 1 1/2" deep dependent upon the soil moisture.

**Row Width:** Preferably drilled in narrow rows.

**Planting Method:** Drill preferred.

**Fertility:** Nitrogen: 75 to 100 lbs./acre PPI & 50 to 75 lbs./acre after first cutting. Phosphorus: 20 - 60 lbs./acre, more if the soil testing indicates less than 30 lbs./acre. Potassium: 40 - 80 lbs./acre. A soil test should be performed for better accuracy. The above fertilization rates serve as a guide only.

### Suggest Harvest Management

Do not cut or graze until the forage reaches 18" in height. Cut at 36"-48" or 60-75 days for the best possible quality and highest possible yields. Cut 6"-8" or above the second internode with a crimper to speed the drying and regrowth process. Harvest forage at about 70-75% moisture. Chop at 1/4"-1/8" to get optimal packing.
