WONDERGREEN SX-66

Agronomic Attributes

Potential Forage Yield	3
Early Growth Rate	1
Regrowth	2
Average Plant Height	6' - 7'
Standability	2
Drought Tolerance	3
Leafiness	3
Avg. Seeds/ Lb.	17,500
Fast Dry Down	2
Sweetness	3

Primary Uses

Hay	2
Hay Plow Down	1
Silage	3
Grazing/Pasture	2
Greenchop	2

Planting Rate (LBS./ Acre)

	Optimal Planting Method	
	Wide Rows	Narrow Rows
Moisture Level	30" to 40"	<u>Drilled or Broadcast</u>
Adequate	30 LBS/AC	50 LBS/AC
Limited	12 LBS/AC	30 LBS/AC

Footnotes: 1- Numerical Rating: 1 to 9 1= Excellent 5= Average 9= Poor
Ratings and descriptions are based on the research and field observations that were compared with products from multiple locations and years. Read all labels and bag tags due to the reason that they contain conditions of sale, including limitations of warranty and remedy.

Why our Wondergreen?

Wondergreen SX-66 is a highly versatile sorghum-sudangrass hybrid that offers numerous benefits for customers in the agricultural industry. It is suitable for silage, pasture, hay, or greenchop, providing flexibility in its usage. This hybrid is specifically bred for its ability to produce high protein content and tonnage, ensuring nutritious forage for livestock. With fast recovery and good standability, Wondergreen SX-66 maintains its structure even after grazing or cutting. Additionally, its sweet flavor makes it highly palatable to animals, contributing to their satisfaction and performance.

Annual Summer Management

Planting Date: Late April through mid August.

Soil temperature should be 60 - 65 or warmer. Planting too early could cause slow early growth and reduction in population.

Planting Depth: 3/4" to 1 1/2" deep dependent upon the soil moisture.

Row Width: Preferably drilled in narrow rows .

Planting Method: Drill preferred.

Fertility: Nitrogen: 75 to 100 lbs./acre PPI & 50 to 75 lbs./acre after first cutting. Phosphorus: 20 - 60 lbs./acre, more if the soil testing indicates less than 30 lbs./acre. Potassium: 40 - 80 lbs./acre. A soil test should be performed for better accuracy. The above fertilization rates serve as a guide only.

Suggested Harvest Management

It may be grazed in 30-45 days or when 20-25 inches tall. Plant at time sudangrass or sorghum is generally planted. May be planted 40 days before frost for emergency feed production.

Yield

1 - 3 Cuttings dependent upon planting date, availability of water, and growing season. 3 - 6 tons/acre dry matter (18 to 20 tons green weight).
